                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mapping information for this clone was provided by Dr. John D. Werberson. Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc.
                                                                                                                                                                                                                                                                                                                                               NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 511-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The clone sequenced to the left is RP11-8P17, 2000 bp overlap.
Actual start of this clone is at base position 185268 of
RP11-393A12; actual end is at base position 64196 of RP11-725C19.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence was finished as follows unless otherwise noted:
                                                                                         Center: Washington University Genome Sequencing Center
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note="match to EST BG257959 (NID:g12767775)"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Polymorphisms exist between AC013365 and AC110804

MAPPING INFORMATION: Mapping information for this clone was provided by Dr. John D.

```
McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
```

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8 The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org SOURCE INFORMATION:

NEIGHBORING SEQUENCE INFORMATION: The clone sequenced to the right is RP11-310A13. Actual start of this clone is at base position 1 of RP11-733C7; actual end is at base position 161280 of RP11-733C7.

Data from AC009792 was used to finish the clone, AC055827

The sequence of AC055827 has been incorporated into AC093903 /134. ./385 /note="similar to EST BG989897 (NID:g14393967)" BG388107 (NID:913281553) 1866. .7318 "note="similar to EST C06175 (NID:g1502951)" /organism="Homo sapiens" 306. .406 //rpt_family="(GGAA)n" 471. .525 /rpt_family="AT_rich" 530. .782 /clone="RP11-733C7" /clone_lib="RPCI-11" 148. 334 /rpt_family="L1" 306. 406 7777. .7918 'note="similar to EST /rpt_family="L1"

                                                                                                                                                                                                                                                          SOURCE
```

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

```
Female blood DNA was isolated from one randomly chosen donor (out of 10 female blood DNA was isolated from one randomly chosen donors) and partially digested with a combination of EcoRI and EcoRI Methylase for library segments 12.2 or either MboI into the pBACe3.6 vector between the EcoRI sites for library segments 12 or the BamHI sites for library segments 12 or the BamHI sites for library segments 18.2 or the BamHI sites for library segments 344. The lightion products were transformed into DHIOB electrocompetent cells (BRL Life Technologies). The library has been arrayed into 384-well microtiter dishes and also gridded onto 22x2cm nylon high density filters for screening by probe hybridization.
                                                                                                                                                                                       The RPCI-13 Human Female BAC Library was constructed using improved cloning techniques developed by Kazutoyo Osoegawa. The library was generated by Bachui Zhao in our laboratory. Construction was funded by a grant from the National Human Genome Research Institute (NHGRI, NIH) (#IROIRGOlib5-03). The library was generated according to the new NHGRI/DOE 'Guidance on Human Subjects in Large-Scale DNA

This is the 5' sequence of the clone insert
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Bmail s.wiemannédkfz- heidelberg.de;
sequenced by GBF (National Research Centre for Biotechnology Ltd.,
Braunschweig/Germany) within the cDNA sequencing consortium of the
German Genome Project.

No s1 sequence available. This clone (DKFZp686C09156) is available at the RZPD in Berlin.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
